These curves are based on tests, performed according to EN1267, with a vertical installation.
All ball check valves are fully open at approx. 0.5 m/s. Opening pressure presupposes that pipes are full of water, both at upstream and downstream.
These curves are based on tests, performed according to EN1267, with a vertical installation.

All ball check valves are fully open at approx. 0.5 m/s. Opening pressure presupposes that pipes are full of water, both at upstream and downstream.
